

Technical Manual
No. 5-815-3

HEADQUARTERS
DEPARTMENT OF THE ARMY
Washington, DC, 24 July 1991

HEATING, VENTILATING AND AIR CONDITIONING (HVAC) CONTROL SYSTEMS

APPROVED FOR PUBLIC RELEASE: DISTRIBUTION IS UNLIMITED

Chapter 1

General

Purpose	1-1	3
Scope	1-2	3
References	1-3	3
Policy	1-4	3
Control-system designer guidance	1-5	3
Design concept	1-6	3
Control system standards	1-7	3
Project implementation	1-8	3
Design package requirements for HVAC control systems	1-9	3
Control system interface to EMCS	1-10	4
Fan-starter control-circuit override by external control systems	1-11	4
Coordination with HVAC system balancing	1-12	4
Explanation of Terms	1-13	4
Symbols	1-14	4
Figures	1-15	4

Chapter 2

HVAC Control System Equipment, Equipment Uses and HVAC Control Loops

General	2-1	5
Control of HVAC system operating modes and process variables	2-2	5
Control-system equipment	2-3	5
Control loop	2-4	8
Open control loop	2-5	8
Closed control loop	2-6	8
Application of open-loop control and closed-loop control to HVAC systems	2-7	8
Typical control modes	2-8	8
Standard HVAC SYSTEM control loops	2-9	10
Sizing and selection of control-system devices	2-10	10
Sizing of the air-compressor motor	2-11	10
Determination of control-valve flow coefficient (C_v)	2-12	10
Calculation of liquid-control-valve flow coefficient (C_v)	2-13	10
Calculation of steam-control-valve flow coefficient (C_v)	2-14	11
Surge-protection provisions for transmitter and control wiring	2-15	12

Chapter 3

Standard Control Loops

General	3-1	23
Cooling-coil-temperature control loop	3-2	23
Outside-air preheat-coil-temperature control loop	3-3	23
Heating-coil-temperature control loop	3-4	23
Mixed-air-temperature and economizer control loops	3-5	23
Supply-duct static-pressure control loop	3-6	24
Return-fan-volume control loop	3-7	24
Humidifier control loop	3-8	24

The typical schematic	3-9	24
The typical ladder diagram	3-10	25
The typical equipment s	3-11	25

Chapter 4

Standard HVAC Control Systems

General	4-1	41
Identification of control-system devices	4-2	41
Project-specific drawings	4-3	41
Space-temperature-controlled perimeter-radiation control system	4-4	41
Unit-heater temperature control system	4-5	41
Gas-fired infrared-heater control system	4-6	41
All-air small-package unitary system control system	4-7	41
Deal-temperature fan-coil unit control system	4-8	41
Control systems that require control panels	4-9	41
Standard HVAC control panel	4-10	41
Central-plant steam hydronic-heating control system	4-11	42
Single-building hydronic-heating with hot water boiler control system	4-12	42
Central-plant high-temperature hot-water hydronic-heating control system	4-13	43
Central-plant steam dual-temperature hydronic control system	4-14	43
Central-plant high-temperature hot-water dual-temperature hydronic control system	4-15	44
Single building dual-temperature hydronic control system	4-16	44
Heating-and-ventilating control system	4-17	45
Multizone HVAC control system with return fan	4-18	45
Deal-duct HVAC control system with return fan	4-19	46
Bypass multizone HVAC control system with return fan	4-20	47
Variable-air-volume HVAC control system without return fan	4-21	48
Variable-air-volume HVAC control system with return fan	4-22	49
Single-zone HVAC control system without return fan	4-23	50
Dual-temperature-coil single-zone HVAC control system without return fan	4-24	51
Single-zone HVAC control system with humidity control without return fan	4-25	52
Single-zone HVAC control system with direct-expansion (DX) cooling coil without return fan	4-26	52

Chapter 5

Control System Design Variations

General	5-1	165
Control-system variations for 1165-percent outside air (continuous operation)	5-2	165
Control-system variations for exhaust fans	5-3	165
Control-system variations for smoke dampers	5-4	165
Control-system variations for variable-speed drives	5-5	165
Control-system variations for steam-preheat coil with face-and-bypass damper	5-6	165
Control-system variation for hot-water or hot-glycol preheat coil	5-7	165

Control-system variation for combining hydronic-system and air-system controls in the same control panel	5-8	165
Unoccupied-mode space-temperature setback control for terminal units	5-9	165
Control-system variations for 2-way shutoff valves for fan-coil units	5-10	165
Control-system variations for EMCS-initiated building-purge and recirculation modes	5-11	166
Control-system variations for smoke control and freeze protection	5-12	166
Control-system variations for non-economizer HVAC systems	5-13	166
Control systems with dual-steam valves	5-14	166

Chapter 6

Retrofit of Existing HVAC Control Systems

Introduction	6-1	191
Valve sizing and its effect on hydronic systems	6-2	191
Damper sizing and its effect on air-handling systems	6-3	191
Replacement of 3-way and 2-way valves	6-4	191
Retrofit projects where only final elements may be left in place	6-5	191
Retrofits involving economizer control loops	6-6	191
Retrofit projects involving HVAC systems not covered in this manual	6-7	191
General considerations for retrofit projects	6-8	191

Bibliography

Glossary

LIST OF FIGURES

<i>Figure No.</i>	<i>Page</i>
2-1 Two butterfly valves on a common pipe tee	13
2-2 Conversion of an electronic signal to a pneumatic signal	14
2-3 Simultaneous heating and cooling with pneumatic actuators without positive positioners	14
2-4 Control system with positive positioners to avoid simultaneous heating and cooling	15
2-5 Modulating control circuits impedance limitation	16
2-6 Manual reset feature	17
2-7 Control loop	18
2-8 Open control loop	18
2-9 Closed control loop	19
2-10 Two loops controlling one device (humidity control with high limit)	19
2-11 Two-position control	20
2-12 Simple control loop applied to outside air heating	20
2-13 Proportional control mode	21
2-14 Proportional plus integral control mode	21
2-15 Comparison of P mode PI modes and PID modes for a step change in setpoint and the contributions of each mode to controller output signal	22
3-1 Cooling-coil control loop	27
3-2 Outside-air preheat-coil-temperature control loop	27
3-3 Heating-coil-temperature control loop scheduled from outside-air temperature	28
3-4 Outside-air-temperature controller input/output schedule	29

Figure No.	LIST OF FIGURES	Page	Figure No.	LIST OF FIGURES	Page	Figure No.	LIST OF FIGURES	Page
3-5	Heating-coil-temperature control loop with heating coil controlled at a constant temperature	30	4-11B	Control-system ladder diagram for central-plant high-temperature hot-water dual-temperature hydronic control system XX	94	4-19F	Terminal-block layout for single-zone HVAC control system XX control panel	146
3-6	Mixed-air-temperature and economizer control loops	31	4-11C	Equipment for central-plant high-temperature hot-water dual-temperature hydronic control system XX	95	4-20A	Control-system schematic for dual-temperature-coil single-zone HVAC control system XX	147
3-7	Design condition for economizer-mode operation	32	4-11D	Control-panel interior-door layout for central-plant high-temperature hot-water dual-temperature hydronic control system XX	96	4-20B	Control-system ladder diagram for dual-temperature-coil single-zone HVAC control system XX	148
3-8	Selecting the economizer switchover point	33	4-11E	Back-panel layout for central-plant high-temperature hot-water dual-temperature hydronic control system XX control panel	97	4-20C	Equipment for dual-temperature-coil single-zone HVAC control system XX	149
3-9	Effect on energy conservation of selection of economizer-switchover point -	84	4-11F	Terminal-block layout for central-plant high-temperature hot-water dual-temperature hydronic control system XX control panel	98	4-20D	Control-panel interior-door layout for dual-temperature coil single-zone HVAC control system XX	150
3-10	Supply-duct static-pressure control loop	35	4-12A	Control-system schematic for single-building dual-temperature hydronic system XX	99	4-20E	Back-panel layout for dual-temperature-coil single-zone HVAC system XX control panel	151
3-11	Return-fan-volume control loop	35	4-12B	Control-system ladder diagram for single-building dual-temperature hydronic system XX	100	4-20F	Terminal-block layout for dual-temperature-coil single-zone HVAC system XX control panel	152
3-12	Humidifier control loop	36	4-12C	Equipment for single-building dual-temperature hydronic control system XX	101	4-21A	Control-system schematic for single-zone HVAC system XX with humidity control	153
3-13	Typical schematic	37	4-12D	Control-panel interior-door layout for single-building dual-temperature hydronic system XX	102	4-21B	Control-system ladder diagram for single-zone HVAC system XX with humidity control	154
3-14	Typical ladder diagram	38	4-12E	Back-panel layout for single-building dual-temperature hydronic system XX control panel	103	4-21C	Equipment for single-zone HVAC system XX with humidity control	155
3-15	Typical equipment schedule	39	4-12F	Terminal-block layout for single-building dual-temperature hydronic system XX control panel	104	4-21D	Control-panel interior-door layout for single-zone HVAC system XX with humidity control	156
4-1	Space-temperature-controlled perimeter-radiation control system XX	55	4-13A	Control-system schematic for heating-and-ventilating system XX	105	4-21E	Control-panel back-panel layout for single-zone HVAC system XX with humidity control	157
4-2	Unit-heater temperature control system XX	55	4-13B	Control-system ladder diagram for heating-and-ventilating system XX	106	4-21F	Control-panel terminal-block layout for single-zone HVAC system XX with humidity control	158
4-3	Gas-fired infrared-heater temperature control system XX	56	4-13C	Equipment for heating-and-ventilating control system XX	107	4-22A	Control-system schematic for DX-coil single-zone HVAC system XX	159
4-4	Air-air small-package unitary-system control system XX	56	4-13D	Interior-door layout for heating-and-ventilating system XX control panel	108	4-22B	Control-system ladder diagram for DX-coil single-zone HVAC system XX	160
4-5	Dual-temperature fan-coil-unit temperature control system XX	57	4-13E	Back-panel layout for heating-and-ventilating system XX control panel	109	4-22C	Equipment for DX-coil single-zone HVAC system XX	161
4-6A	Standard wall-mounted HVAC control-panel arrangement	59	4-13F	Terminal-block layout for heating-and-ventilating system XX control panel	110	4-22D	Control-panel interior-door layout for DX-coil single-zone HVAC system XX	162
4-6B	Section "A-A" through standard HVAC control panel	60	4-14A	Control-system schematic for multizone HVAC system XX	111	4-22E	Back-panel layout for DX-coil single-zone HVAC system XX control panel	163
4-6C	Standard HVAC control-panel interior door	61	4-14B	Control-system ladder diagram for multizone HVAC system XX	112	4-22F	Terminal-block layout for DX-coil single-zone HVAC system XX control panel	164
4-6D	Standard HVAC control-panel back-panel layout	62	4-14C	Equipment for multizone HVAC control system XX	113	5-1	Schematic variations for 100-percent outside-air systems	167
4-6E	Standard HVAC control-panel terminal-block assignments	63	4-14D	Control-panel interior-door layout for multizone HVAC system XX	114	5-2	Ladder-diagram variations of 100-percent outside-air systems	168
4-6F	Controller wiring	64	4-14E	Back-panel layout for multizone HVAC system XX control panel	115	5-3	Schematic variations for exhaust fans	169
4-6G	Supply-fan and return-fan starter wiring	65	4-14F	Terminal-block layout for multizone HVAC system XX control panel	116	5-4	Ladder-diagram variations for exhaust fans	170
4-6H	Exhaust-fan and pump-starter wiring	66	4-15A	Control-system schematic for dual-duct HVAC system XX	117	5-5	Schematic variations for smoke dampers	171
4-6I	HVAC control-panel power wiring	67	4-15B	Control-system ladder diagram for dual-duct HVAC system XX	118	5-6	Ladder-diagram variations for smoke dampers	172
4-7A	Control-system schematic for central-plant steam hydronic-heating control System XX	69	4-15C	Equipment for dual-duct HVAC control system XX	119	5-7	Schematic variations for variable-speed drives	173
4-7B	Control-system ladder diagram for central-plant steam hydronic-heating control system XX	70	4-15D	Control-panel interior-door layout for dual-duct HVAC system XX	120	5-8	Ladder-diagram variations for variable-speed drives	174
4-7C	Equipment for central-plant steam hydronic-heating control system XX	71	4-15E	Back-panel layout for dual-duct HVAC system XX control panel	121	5-9	Equipment variations for variable-speed drives	175
4-7D	Control-panel interior-door layout for central-plant steam hydronic-heating Control system XX	72	4-15F	Terminal-block layout for dual-duct HVAC system XX control panel	122	5-10	Interior-door-layout variations for variable-speed drives	176
4-7E	Back-panel layout for central-plant steam hydronic-heating control system XX control panel	73	4-16A	Control-system schematic for bypass multizone HVAC system XX	123	5-11	Back-panel-layout variations for variable-speed drives	177
4-7F	Terminal-block layout for central-plant steam hydronic-heating control system XX control panel	74	4-16B	Control-system ladder diagram for bypass multizone HVAC system XX	124	5-12	Control-system variations for steam-preheat coil with face-and-bypass damper	178
4-8A	Control-system schematic for single-building hydronic-heating with hot water boiler control system XX	75	4-16C	Equipment for bypass multizone HVAC control system XX	125	5-13	Control-system variations for unoccupied mode setback	179
4-8B	Control-system ladder diagram for single-building hydronic-heating with hot water boiler control system XX	76	4-16D	Control-panel interior-door layout for bypass multizone HVAC control system XX	126	5-14	Control-system variation for 2-way shutoff valve on fan-coil units	180
4-8C	Equipment for single-building hydronic-heating with hot water boiler control system X	77	4-16E	Back-panel layout for bypass multizone HVAC system XX control panel	127	5-15	Control-system variation for EMCS building-purge and recirculation modes for pneumatic actuators	181
4-8D	Control-panel interior-door layout for single-building hydronic-heating with hot water boiler control system XX	78	4-16F	Terminal-block layout for bypass multizone HVAC system XX control panel	128	5-16	Control-system variation for EMCS building-purge and recirculation modes for electric or electronic actuators	182
4-8E	Back-panel layout for single-building hydronic-heating with hot water boiler control system XX control panel	79	4-17A	Control-system schematic for VAV HVAC system XX without return fan	129	5-17A	Control-system schematic for single-zone HVAC system without economizer control mode	183
4-8F	Terminal-block layout for single-building hydronic-heating with hot water boiler system XX control panel	80	4-17B	Control-system ladder diagram for VAV HVAC system XX without return fan	130	5-17B	Ladder diagram for single-zone HVAC system without economizer mode	184
4-9A	Control-system schematic for central-plant high-temperature hot-water hydronic-heating control system XX	81	4-17C	Equipment for VAV HVAC system XX without return fan	131	5-17C	Equipment schedule for single-zone HVAC system without economizer control mode	185
4-9B	Control-system ladder diagram for central-plant high-temperature hot-water hydronic-heating control system XX	82	4-17D	Control-panel interior-door layout for VAV HVAC system XX without return fan	132	5-17D	Control-panel interior-door layout for single-zone HVAC system without economizer control mode	186
4-9C	Equipment for central-plant high-temperature hot-water hydronic-heating control system XX	83	4-17E	Control-panel back-panel layout for VAV HVAC system XX without return fan	133	5-17F	Control-panel back-panel layout for single-zone HVAC system without Economizer control mode	187
4-9D	Control-panel interior-door layout for central-plant high-temperature hot-water hydronic-heating control system XX	84	4-17F	Control-panel terminal-block layout for VAV HVAC system XX without return fan	134	5-18	Control-panel terminal-block layout for single-zone HVAC control system without economizer control mode	188
4-9E	Back-panel layout for central-plant high-temperature hot-water hydronic-heating system XX control panel	85	4-18A	Control-system schematic for VAV HVAC system XX with return fan	135	5-19	Schematic variations for dual steam valves	189
4-9F	Terminal-block layout for central-plant high-temperature hot-water hydronic-heating system XX control panel	86	4-18B	Control-system ladder diagram for VAV HVAC system XX with return fan	136	5-19	Equipment-schedule variations for dual steam valves	190
4-10A	Control-system schematic for central-plant steam dual-temperature hydronic control system XX	87	4-18C	Equipment for VAV HVAC system XX with return fan	137	Table No.	LIST OF TABLES	Page
4-10B	Control-system ladder diagram for central-plant steam dual-temperature hydronic system XX	88	4-18D	Control-panel interior-door layout for VAV HVAC system XX with return fan	138	1-1	Commissioning procedure	4
4-10C	Equipment for central-plant steam dual-temperature hydronic control System XX	89	4-18E	Control-panel back-panel layout for VAV HVAC system XX with return fan	139	2-1	Controller features	7
4-10D	Control-panel interior-door layout for central-plant steam dual-temperature hydronic system XX	90	4-18F	Control-panel terminal-block layout for VAV HVAC system XX with return fan	140	2-2	Air consumption of control devices	10
4-10E	Back-panel layout for central-plant steam dual-temperature hydronic system XX control panel	91	4-19A	Control-system schematic for single-zone HVAC control system XX	141	2-3	Available control valves with C _v in the range of 16 to 25	11
4-10F	Terminal-block layout for central-plant steam dual-temperature hydronic system XX control panel	92	4-19B	Control system ladder diagram for single-zone HVAC control system XX	142			
4-11A	Control-system schematic for central-plant high-temperature hot-water dual-temperature hydronic system XX	93	4-19C	Equipment for single-zone HVAC control system XX	143			
			4-19D	Control-panel interior-door layout for single-zone HVAC control system XX	144			
			4-19E	Back-panel layout for single-zone HVAC control system XX control panel	145
